AI Analysis Summary

Full-Site AI Analysis

Odito AI Insight

Overall site health is very poor with a score of undefined/100. AI visibility is significantly below average at 0/100 (Very Poor). Key gaps include structured schema implementation and entity coverage. Site shows strong technical foundation with minimal issues. Performance optimization should be prioritized to enhance user experience and rankings.

Key Strengths vs Issues

What's working and what needs fixing

The Odito AI engine evaluated all SEO and AI visibility signals. Here is a summary of the site's strongest points and most critical areas for improvement.

✓ Key Strengths

|                                                        |
|--------------------------------------------------------|
| ✓ Valid SSL — HTTPS enforced site-wide via 301         |
| ✓ XML Sitemap with 298 URLs correctly declared         |
| ✓ Mobile-responsive with proper viewport configuration |
| ✓ Clean URL architecture and logical hierarchy         |
| ✓ Core landing pages correctly indexed by Google       |

✗ Issues to Address

|                                                         |
|---------------------------------------------------------|
| ✗ 47 pages missing JSON-LD structured data markup       |
| ✗ Knowledge Graph entity not claimed or verified        |
| ✗ Mobile LCP 3.2s exceeds Google's 2.5s Good threshold  |
| ✗ 31 images missing ALT text — accessibility & SEO risk |
| ✗ 5 key revenue pages blocked by noindex tags           |

Priority Assessment

✦ Odito AI Insight

Odito AI identifies the noindex issue on 5 revenue pages as the fastest win — a 30-minute fix restoring Google ranking access. Missing schema on 47 pages is the most impactful structural improvement, delivering +15 AI Visibility points once implemented.

04

Priority Fix Roadmap

Action plan ordered by impact and effort

Execute items in order for maximum cumulative score improvement. Easy items take hours; Hard items may need a developer.

| #  | Issue                                  | Impact | Effort | Est. Gain | Timeline  |
|----|----------------------------------------|--------|--------|-----------|-----------|
| 1  | Remove noindex from 5 key pages        | High   | Easy   | +8 pts    | Day 1     |
| 2  | Add FAQ schema to top 10 blog posts    | High   | Easy   | +6 pts    | Day 1-2   |
| 3  | Fix 14 broken internal links           | Medium | Easy   | +4 pts    | Day 1-2   |
| 4  | Add Article/WebPage schema to 47 pages | High   | Medium | +15 pts   | Day 3-7   |
| 5  | Rewrite 10 page intros for GEO         | Medium | Medium | +5 pts    | Day 7-14  |
| 6  | Fix 18 missing meta descriptions       | Medium | Easy   | +4 pts    | Day 7-10  |
| 7  | Add ALT text to 31 images              | Low    | Easy   | +2 pts    | Day 7-10  |
| 8  | Claim Knowledge Graph entity           | High   | Hard   | +8 pts    | Day 14-21 |
| 9  | Optimise mobile LCP to under 2.5s      | High   | Hard   | +10 pts   | Day 14-30 |
| 10 | Create E-E-A-T and GEO hub pages       | Medium | Hard   | +5 pts    | Day 21-30 |

Roadmap Impact Forecast

+ Odito AI Insight

Following this roadmap is projected to lift overall score 58→82, SEO 67→84, and AI Visibility 41→68 within 30 days. Items 1-3 take under half a day and deliver +18 points.

05

SEO Health Overview

Score breakdown by category

31

Score Breakdown by Category

Score Grade Reference

| Range  | Grade | Status    | What it means                                        |
|--------|-------|-----------|------------------------------------------------------|
| 90-100 | A+    | Excellent | Top percentile — elite signals across all categories |
| 80-89  | A     | Very Good | Minor improvements reach the elite tier              |
| 70-79  | B     | Good      | Solid base — focused fixes move the needle           |
| 60-69  | C+    | Fair      | Prioritised action plan recommended                  |
| 50-59  | C     | Average   | Structured improvement plan needed                   |
| 0-49   | D     | Poor      | Significant issues across multiple dimensions        |

Score Interpretation

+ Odito AI Insight

sapphiredigitalagency.com scores D (31/100). SEO Health at 55 shows room for improvement. AI Visibility at 0 is critically low — and the fastest to fix.

Schema Type Distribution

- 25 pages with schema (100%)
- 7 schema types detected

Detected types:

- Person — 25 pages
- WebPage — 25 pages
- Organization — 25 pages
- WebSite — 25 pages
- Article — 25 pages
- FAQPage — 25 pages
- ImageObject — 2 pages

Why Structured Data Matters

| Platform             | With Schema                | Without Schema              | Your Gap  |
|----------------------|----------------------------|-----------------------------|-----------|
| Google Rich Results  | Eligible for rich results  | Plain blue link only        | Achieved  |
| Google AI Overviews  | Entities extracted & cited | Anonymous — skipped         | Optimized |
| ChatGPT / Perplexity | High citation probability  | Low citation probability    | Maximized |
| LLM Training Index   | Structured facts indexed   | Unstructured — low priority | Indexed   |

Structured Data Impact

Odito AI Insight

Excellent! All 25 pages have comprehensive schema with 7 different types detected. This maximizes AI search visibility and rich result eligibility. Focus now on schema quality and advanced types like FAQ, HowTo, and Event schemas for additional opportunities.

Understanding AI Search Optimization

GEO

Generative Engine Optimization

Optimising content so AI models like ChatGPT and Gemini cite your pages when generating answers. Requires conversational structure, entity-rich writing, and direct answers in the first 60 words.

AEO

Answer Engine Optimization

Structuring content for direct answer extraction. FAQPage schema, Q&A formatting, and concise definitions are the primary signals for Perplexity and Google AI Overviews.

AISEO

AI Search Engine Optimization

The unified discipline covering AI-powered search visibility — traditional SEO signals combined with Knowledge Graph authority, entity coverage, and LLM indexability.

AI Readiness Gap Analysis

Odito AI Insight

Low AI visibility. Significant optimization needed for AI search readiness and entity recognition.

15

| GEO             | ✗ Missing | 0     | Create hub page + schema |
| Knowledge Graph | ■ Partial | 1     | Add schema + content     |
| AEO             | ✗ Missing | 0     | Create hub page + schema |

### What is a Knowledge Graph Entity?

Google's KG is a database of facts about real-world entities. A verified brand entity gives AI models an authoritative source of facts about your business.

### Impact Without a KG Entity

Without a KG anchor, AI models may fabricate or omit facts about your brand in generated answers.

### How to Claim Your Entity

Verify Google Business Profile → add Organization schema with sameAs to LinkedIn/Twitter/Crunchbase → ensure NAP consistency.

### Knowledge Graph Impact

Odito AI Insight

Claiming the KG entity adds +8 AI Readiness points and improves brand citation accuracy across ChatGPT, Gemini, and Perplexity. Without it, AI-generated answers about your brand may be inaccurate.

SECTION 06

# Action Plan & Forecast

30-day roadmap, growth projection and methodology

18

AI Optimisation Recommendations

Prioritised actions to improve AI search visibility

AI Action Plan

| # | Recommended Action                        | Expected Impact | Effort | Priority |
|---|-------------------------------------------|-----------------|--------|----------|
| 1 | Add JSON-LD schema to 47 pages            | +15 pts         | Medium | P1       |
| 2 | Claim Knowledge Graph entity              | +8 pts          | Hard   | P2       |
| 3 | Add FAQPage schema to 31 Q&A pages        | +6 pts          | Easy   | P3       |
| 4 | Rewrite 10 intros for conversational GEO  | +5 pts          | Medium | P4       |
| 5 | Create E-E-A-T and AI Overviews hub pages | +4 pts          | Medium | P5       |
| 6 | Add Organization schema with sameAs links | +3 pts          | Easy   | P6       |

Implementation Steps

1

Add JSON-LD Schema to 47 Pages

Use Google's Structured Data Markup Helper to generate JSON-LD. Place in <head>. Validate with Rich Results Test. Article for blogs; WebPage + BreadcrumbList for landing pages.

2

Claim Knowledge Graph Entity

Verify Google Business Profile → ensure consistent NAP → add Organization schema with sameAs links → submit Knowledge Panel claim.

3

Add FAQPage Schema to 31 Pages

Wrap Q&A content in FAQPage JSON-LD. Each Question/Answer must match visible text exactly. Keep answers under 300 characters for optimal AI extraction.

19

90-Day Score Projection

SEO Score AI Score PERF Score

SEO Health  
AI Visibility  
Performance

After 90 days:

SEO: 67 → 84

AI Vis: 41 → 68

Speed: 71 → 84

Forecast Breakdown

| Milestone | SEO Health | AI Visibility | Performance | Overall |
|-----------|------------|---------------|-------------|---------|
| Current   | 67         | 41            | 71          | 60      |
| 30 Days   | 76         | 56            | 75          | 69      |
| 60 Days   | 80         | 62            | 80          | 74      |
| 90 Days   | 84         | 68            | 84          | 79      |

90-Day Growth Projection

Odito AI Insight

Executing the full recommended plan is projected to move overall grade from C+ (58) to B+ (79) within 90 days. AI Visibility gains +27 points — the most dramatic improvement — positioning the site to capture 15,000-25,000 additional monthly sessions.

20

30-Day Action Plan

Structured implementation roadmap

Week 1 Technical Quick Wins

Days 1-7

- Remove noindex from 5 revenue pages (30 min)
- Fix 14 broken internal links (1 hour)
- Add FAQ schema to top 10 blog posts (2-3 hrs)
- Fix 18 missing meta descriptions on key pages

Week 2 Schema Rollout

Days 8-14

- Add Article JSON-LD to all blog posts (1 day)
- Add WebPage schema to all landing pages
- Add Organization schema with sameAs links
- Validate all schema via Google Rich Results Test

Week 3 Content Optimization

Days 15-21

Audit Methodology

How Odito AI performs SEO and AI Visibility audits

Odito AI uses a multi-layer analysis engine combining traditional SEO crawling, AI entity detection, structured data validation, and LLM citation measurement to produce a 360-degree audit.

1

Crawler Engine

Distributed crawler scans up to 10,000 pages, extracting on-page signals, HTTP headers, redirects, canonical tags, robots directives, and structured data from every URL.

2

AI Entity Detection

Entity graph maps content against Google's Knowledge Graph and Wikidata, identifying covered, partially covered, and missing entities.

3

Structured Data Validation

All JSON-LD, Microdata, and RDFa validated against Schema.org specs and Google Rich Results requirements.

4

LLM Citation Analysis

Odito AI probes ChatGPT, Perplexity, Gemini, and Claude with domain-related queries to measure actual brand citation rate.

5

Core Web Vitals

PageSpeed Insights API data collected for all key pages on desktop and mobile, mapped against Good/Needs Work/Poor thresholds.

6

Score Calculation

Weighted model: Technical (25%), On-Page (25%), AI Visibility (30%), Performance (10%), Authority (10%).

22

About Odito AI

AI-powered SEO & Visibility Platform for agencies

Built for Agencies and In-House Teams

Odito AI is a next-generation SEO and AI Visibility audit platform designed for digital agencies and enterprise teams who need professional, white-label audit reports covering both traditional SEO and the emerging AI search landscape.
